

Our Leadership on Climate Change

May 14, 2012

Mosaic believes that global climate change creates uncertainty for our business and poses challenges for the health and well-being of the world's populations - ecologically, socially and economically.

Mosaic is committed to finding ways to meet the demands of crop nutrient production and distribution in the context of the need for reduced greenhouse gas emissions. While, focused on helping the world grow the food it needs, Mosaic has proven its commitment to use its resources more efficiently and has delivered innovative energy recovery technologies that result in the company generating much of our energy from high efficiency and heat recovery systems.

Since the first days of our company's existence, Mosaic has tracked our greenhouse gas emissions to better understand and improve our environmental performance and prepare for physical and regulatory changes that may result from climate change. We focus on understanding and reducing the carbon footprint of our operations and supply chains and work to reduce emissions intensities year over year.

Mosaic takes part in industry efforts to address the challenges of climate change and commits to further engage with policy makers and stakeholders on the issue of climate change. Mosaic recognizes that our action on climate change is good for the environment and for the long term financial health and viability of our company.
